Wenlin Huang

(650) 567-6624, huang.wenl@husky.neu.edu, W Mercer Street, Seattle, WA 98119 Seeking SDE/Web Developer (Back-end) Internship: May - Aug. 2018

Education

Northeastern University - Seattle

Seattle, WA

Master of Science in Computer Science

Sept. 2016 - Dec. 2018 (Expected)

- Key Courses: Distributed Systems, MEAN Stack Web Development, Algorithms, Object-Oriented Design

Shanghai Normal University

Shanghai, China

Bachelor of Business Administration in E-Commerce

Sept. 2011 - Jul. 2015

- **Key Courses:** Algorithms and Data Structures, Database Systems

Technical Skills

• Languages: Java (Proficient), JavaScript, Ruby, Python, Racket, C, SQL

• Databases: MySQL, SQLite, MongoDB, DynamoDB

• Frameworks/Technologies: Bootstrap, AngularJS, Node/Express.js, Rails, Git, Amazon EC2

Academic Projects

• Distributed Ski Data Processing Engine

Sept. 2017 - Nov. 2017

- Built a multi-threaded client that simulates up to 800k concurrent POST/GET requests being sent to server
- Handled concurrent requests with multiple server instances (EC2) with a load balancer (ELB)
- Added a metrics-capturing system using the publish-subscribe pattern, where raw metrics are generated and sent to RabbitMQ, received by another server from the queue, and processed for data analytics
- Efficiently generated statistics (mean/median/99th percentile latency) for each timestamp of up to 800k records, and visualize these data with matplotlib

• Multiplayer Tic-Tac-Toe Platform

Jul. 2017 – Aug. 2017

- Developed an online Tic-Tac-Toe platform using the MEAN Stack that allows users to play with either the computer or another player online
- Incorporated Socket IO into the project which enables real-time communications between multiple connected clients in an online game
- Used Facebook/Google Sign-in services for social login and consumed a third-party Tic-Tac-Toe API for recommendations of computer moves

• Space Invaders

Oct. 2016 - Nov. 2016

- Designed and developed the data structures and features of the game in Racket by applying the design recipe
- Refactored and further extended the game by intensively using higher-order functions
- Created unit tests with 100% code coverage

• Algorithms Course Projects

Feb. 2016 - Apr. 2016

- Established a computational model to estimate the value of the percolation threshold via Monte Carlo simulation using the Union-Find Algorithm
- Implemented an efficient, sorting-based algorithm to find every line segment that connects a subset of 4 or more
 of the points in the plane
- Developed a solution to the 8-puzzle problem using the A* search algorithm

Experience

Venus Software Corporation

Shanghai, China

Web Development Intern

Oct. 2015 - Jan. 2016

- Designed and developed a WeChat news pulling/pushing system with Spring MVC and Hibernate, and a mobile-friendly news feed with jQuery Mobile
- Participated in the development of an EDM (Email Direct Marketing) system using Ruby on Rails
- Fixed various bugs and cross-browser compatibility issues for our team during the development process
